Activate Windows  
Go to Settings to activate Windows

- We have different function in this system.
- First we can import excel data from excel file in the system.
- We can sort the product according to brand and also sort product according to price.
- For adding the product we just have to fill the products serial no , name, brand, category, quantity, quality, mf date, and price and click the add button.
- We can click clear button to erase the data from text field. We can also update the data. By clicking in update button.
- We can also delete the product by selecting by product by mouse click the the table data and press delete button.
- To exit the system we just have to press exit.

.....THE END.....
